Team Meeting Notes

Date: October 14, 2026
Scrum Master this week: Sanya Zuberi
Attendees: Sanya Zuberi, Thywill Lorage

Team

- Sanya and Thywill meet weekly and work on each task independently, each with their own approach.
- Yaswanth is working through the tasks individually, at a pace that fits his schedule better.

Task 02: Revenue Forecasting & Price Sensitivity

Sanya

- Task 01 complete and uploaded on October 6; now working on Task 02.
- Using the same approach as Task 01, with total cost as the revenue measure, built on the daily and hourly demand series.
- Forecasting with a single model (Prophet), chosen for how well it captures future trend.
- Task 02 submission planned for Monday.

Thywill

- Task 01 complete; now working on Task 02.
- Compared all three models in Task 01 and selected SARIMA as the best fit; continuing with the same method for Task 02.

Decisions

- One model is sufficient for Task 02: the brief does not ask for a model comparison, as it did for Task 01. This also keeps the workload manageable, since every submission needs slides.
- Include a dashboard in Task 02 for additional insight, as the deliverables list for each task includes one.
- Both aim to finish within the original deadline.

Next Meeting

- Next week, on Monday by default (Wednesday is an option). Each will confirm availability a day beforehand.
